

$$x(t) = A\cos(\omega t + 0) + xeq$$

$$x(t) = -A\omega\sin(\omega t + 0)$$

$$x(t) = -A\omega^2\cos(\omega t + 0)$$

$$m(-A\omega^2\cos(\omega t + 0))$$

$$= meg - k(A\cos(\omega t + 0) + xeq - 0)$$

$$-kA = -\omega^2 Am$$

$$= k = \omega^2 m$$

$$= \omega = -\frac{k}{m}$$

$$= meg - kA\cos(\omega t + 0) - kxeq + ko$$

$$meg - kxeq + kb = 0$$

$$= xeq = \frac{klo + meg}{k} = \frac{mg}{k} + 6$$

On pose 
$$Y = \frac{m}{2m}$$
 et  $w_0 = \sqrt{\frac{k}{m}}$ 

$$\dot{z} = -2\sqrt{z} - w^2 z + \frac{k}{m} lo + g.$$

$$\frac{n}{2m}$$
  $\frac{k}{m}$ 

$$m < -\frac{k!}{m} \cdot 2m$$

$$\omega_{\lambda} = \sqrt{\omega_0^2 - \chi^2}$$

$$= \sqrt{\frac{k}{m} - \frac{m}{2m}}$$

On a done, par les muls saus-cihi-  
ques:
$$x(t) = e^{vt} (Cos(u,t+0))$$
On pose:
$$x(t_2) = \frac{1}{z}x(t_1)$$

$$e^{-vt_2} = \frac{1}{z}e^{-vt_1}$$

$$e^{-vt_2} = \frac{1}{z}e^{-vt_1}$$

$$e^{-vt_2} = -\ln(2) - vt_1$$

$$e^{-vt_2} = \frac{\ln(2)}{v} - vt_1$$

Une pulsarion prend une persode T = 20 & Seffection. On vent le nb de pérades en  $\frac{\ln(2)}{Y}$ s  $\frac{2\pi}{\omega_1}$   $\frac{V}{\ln(2)}$ 

$$\frac{m}{k} = \infty - \frac{m}{m} - \frac{k^{2}h}{k}$$
on pose  $v = \infty - \frac{m}{k} - \frac{k^{2}h}{k}$ 
donc on  $\alpha$ :
$$\frac{m}{k} = \infty - \frac{m}{k} - \frac{k^{2}h}{k}$$

$$\frac{m}{k} = \omega - \frac{m}{k} - \frac{k^{2}h}{k}$$

$$\frac{1}{2}(r) = \left(\frac{-mo}{k} - \frac{kah}{k}\right)\cos(\omega t)$$

$$\mathcal{Z}\left(T_{1/2}\right) = \mathcal{Z}\left(\frac{\pi}{\omega}\right)$$

$$= \left(\begin{array}{c} mg + k_2h \\ k \end{array}\right) + \frac{mcy}{k} + \frac{k_2h}{k}$$

$$= \left(\begin{array}{c} mg + k_2h \\ k_{1}+k_{2} \end{array}\right)$$

$$\frac{1}{2}\left(\frac{mg+kzh}{k_{1}+k_{2}}\right)$$

$$=3m$$

On éhaire la bille: SF = ma = mg +  $F_B$ = mg - k(x-10)=) mzi = Mg+k(x-lo)-N (cer Fc = -FB). On veur que la boile décale, donc que N soit noble.

On vent A > xeq-zemin or on sair que: mã = may-kæ+kla mæg = 0 = mg-kæg+klo

Kæg = mg+klo

Eg kæg = mg-klo. 2min 2 xeg-H =) xeq-A < klo-Mg mg + lo - A & lo - Mg  $-A \leq (-H-m)g$ A > (M+m)9/k
